

Homework (Writeup) Rules

Homework Rules

Below are a list of rules for submitting the writeup portion of the homework. Failure to follow these rules may result in a penalty to your score.

- Your name and section must be clearly written at the top of your homework.
- All text and figures should be submitted as a single PDF file.
- Any code used to calculate answers or create figures should be included in that PDF file (copy and pasting is okay). Failure to do so will result in a 25% penalty on the written portion of the homework.
- All text should be typed and not handwritten
- All problems should be labeled with the problem number
- The problems must be in order
- Problems must be correctly identified on Gradescope when submitting. Not doing so will result in a 10% penalty on the written portion of the homework.

Here is a sample of what your homework writeup might look like (you may change the formatting as long as the rules above are satisfied).

Grading for the Gradescope portion

For the Gradescope portion of the homework, you will be graded on specific answers and specific plots. We will not look at your code unless your answers don't make sense or seem to correlate with another students'. Some of the questions are open ended. As long as you back up your answers with the evidence that you have (usually the plots), then it is okay.
